

Renewable Energy

At the **end of April** I took part in a school excursion to the college (Zespół Szkół nr 18) nearby. The aim of the trip was to learn about **Renewable Energy**, different kinds of its sources and last but not least to get to know a school where our Polish-German school students will be able to study. The visit was short but intensive. Different professional classrooms were shown to us. We learnt about wind energy, environmentally friendly heating systems, energy cumulation and using Renewable Energy in our home. I think the trip was useful especially for the group of students who worked on the leaving project about such a topic.

On the way back to school we got an ice cream so that the trip was informative and sweet at the same time.
